Corporate Membership

Able Swordplay LLC is a software design and engineering small business.

- We provide software applications engineering, primarily for federal government customers as subcontractor and specialty services provider. We routinely team with large businesses and other small businesses to provide a full-service solution for our clients.
- Agile-based software project management is the core of our expertise, augmented by applications and data architectural design, NIST- 800 compliant security planning, and related consultation and training.
- We also provide planning for intellectual property capture/protection and outsource contracting.

Able Swordplay designs, builds and licenses its own software under the trademark of Relevant Software.

Able Swordplay Software Systems Engineering provides analysis, planning, documentation, and deliverables for the development of complex software systems. We focus on system structure and behavior, and the implementation of these specifications into product. We use Industry-standard processes, methods, and tools for affordability, cybersecurity, and robustness.

Able Swordplay produces target-market software applications under our client's branding that are utilities and tools for their program planning, marketing, and internal training efforts. We do web-based applications developments and stand-alone desktop applications.

Able Swordplay Software Program Management & Software Systems Engineering services provides the tools and experience to turn vision into an operational, sustainable system. Across the Software Development Life Cycle (SLDC) we follow the PMI and INCOSE standards for project and systems engineering – an interdisciplinary approach focused on the disciplined progression from needs to solution development. We work in parallel to the SDLC to develop the product for preservation of intellectual property, branding, contract formulation, and transition into production.

Core Staff Certifications

Project Manager Professional®

SCRUM@Scale Practitioner®

UMich Lean Six Sigma Black Belt

Microsoft Certified Professional

Our staff has extensive experience in many federal agencies:

Central Intelligence Agency
Centers for Medicare and Medicaid Services
Defense Intelligence Agency
US Postal Service Inspection Service
National Geospatial Intelligence Agency
National Institutes of Health
National Reconnaissance Office
US Special Operations Command & JSOC
Naval Research Laboratory
GSA Public Building Service
Army Research Laboratory
FBI
DARPA
Federal Aviation Administration
National Security Agency
United States Army

ASP Projects:

- Enterprise Medical Information System
- Windows-based Desktop applications
- AWS Cloud planning and migration
- Security Controls planning under the NIST Risk Management Framework
- Workforce Professional Training and Development
- Custom Software Development Training Courses
- Cradle-to-grave contract management support

Our staff aligns to your organization's preferred style and culture. From Rapid Development, to hybrid-Agile method, to traditional spec-driven development, ASP has experience to perform, contribute, or advise on you projects. We have on-staff expertise in software engineering, project management, contracts management, marketing, and multimedia production, working as an integrated team to meet and exceed your expectations.

Interpersonal skills are equally important as technical skills for program success – we know that it's not just software, it's *people using software* which makes for program success. So complementing our technical skills are opportunities to provide:

- **Organizing project offices**, motivating and inspiring others with standards-based management and data-driven decision making.
- **Visioning**, to help crystalize vision, strategy, goals and start-up milestones.
- **Mentoring and coaching** for supervising managers of technical programs to convey best practices, standards, and alternatives formulation.
- **Quantitative Analysis**, including Six Sigma statistical techniques.
- **Analyzing requirements and market research** from customers and stakeholders to develop initiatives, campaigns, and focused efforts to satisfy those user needs.
- **Infographics production** to communicate complex topics.

Supporting Complex System Design and Implementation

Able SwordPlay's senior staff have been engaged in planning, managing, and implementing advanced technology for the US Government over two decades. It's Founder was responsible for managing multiple counter-terrorism and intelligence products, most using data-intensive applications, from R&D stage through product fielding. The senior cadre of this small business provides a flexible and scalable resource to build capability, refine processes, and implement best practices.
